

SUSTAINABLE TRANSITION TO THE AGILE AND GREEN ENTERPRISE

Creating Sustainable Leaders

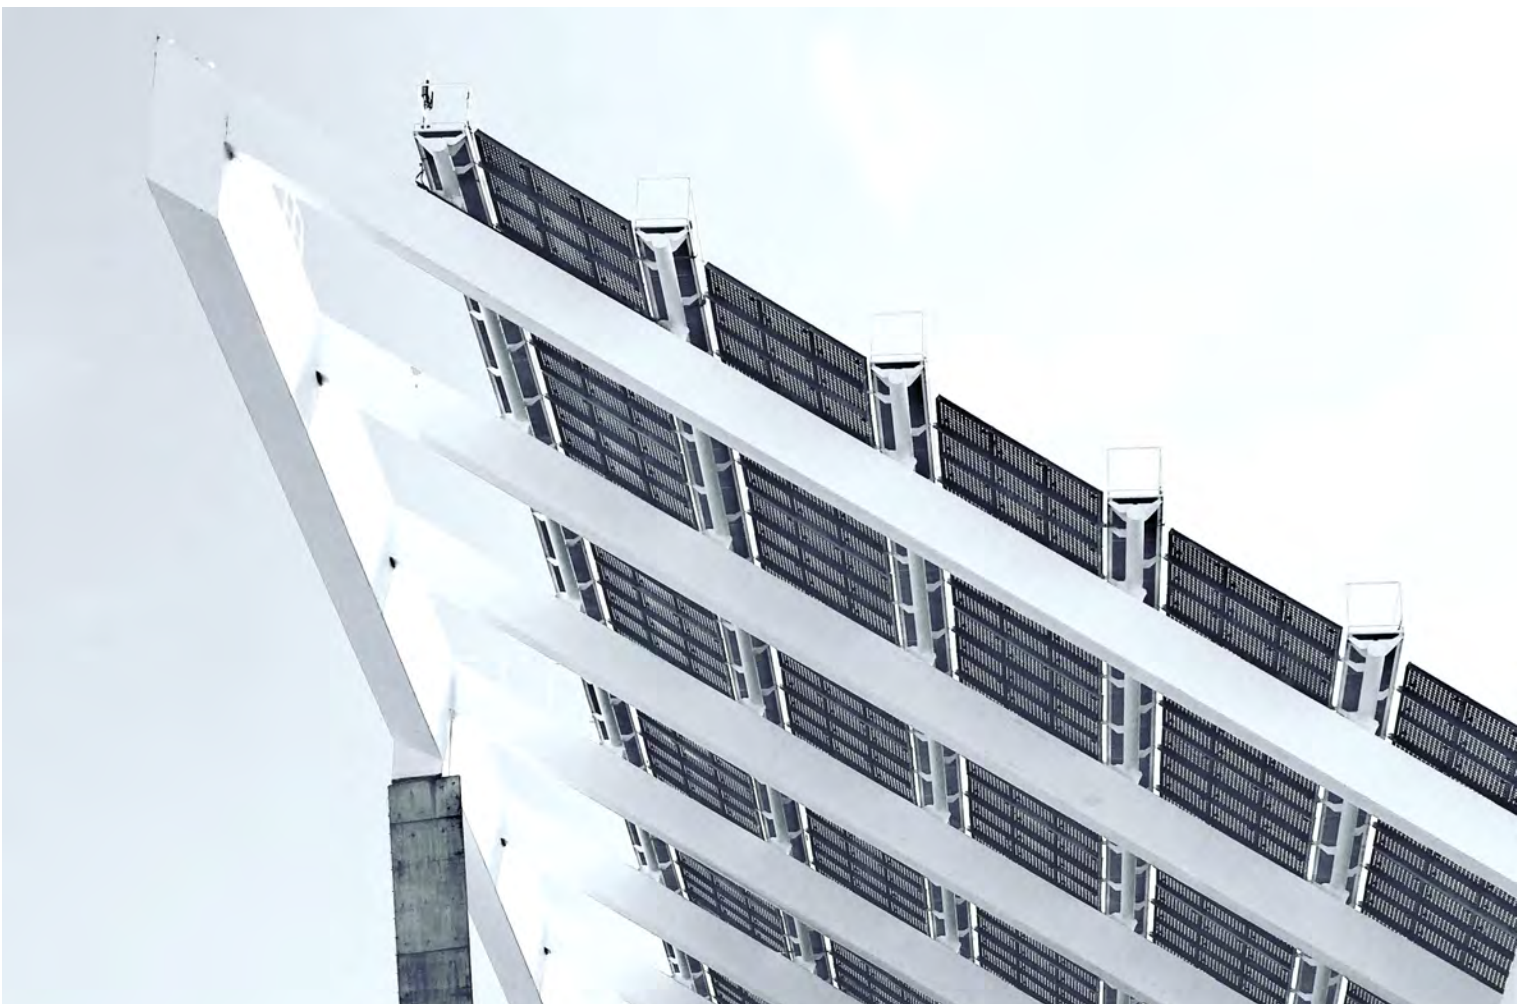

ABOUT

The STAGE project will create an ecosystem with a focus on transforming industrial enterprises into globally leading, agile, and green enterprises. The initiative unites experts from a wide range of fields, including manufacturing, process engineering, and business modelling, finance, and sustainability strategy. In the coming months, the STAGE partners with an extensive network of sustainability centres, will:

- Provide innovation and sustainability assessments to thousands of enterprises, help them deliver sustainability reports and create roadmaps to achieve sustainability objectives.

- Train hundreds of Sustainability Advisors and engage them in a strong and supportive sustainability transition ecosystem.
- Deliver in-depth industrial training to hundreds of selected enterprises to build their sustainability transition plans.
- Offer financial incentives to enterprises to get tailored advisory services and financial support for implementing sustainability transition plans.
- Facilitate investments to enterprises with the highest potential, making them the European industrial economy leaders.

THE BENEFITS

The Sustainable Transition to the Agile and Green Enterprise (STAGE) project provides a platform for effective collaboration between industry players in sustainability reporting and investment readiness support for industrial enterprises. The STAGE project focuses on transforming companies into agile and green leaders of the European economy. The STAGE consortium consists of more than 40 associated partners from more than 20 European countries and 14 partners across 11 different European countries.

Who can benefit from STAGE? Industrial enterprises in Europe are welcome to register with any of the STAGE partners and be the first to benefit from the offerings of the initiative. Furthermore, all public and private advisors and consultants working in the sustainability field are encouraged to join the STAGE network.

1 Innovation & Sustainability Assessments

Innovation and Sustainability Assessment (incl. GHG and ESG assessments) in-line with industry-leading standards and regulations (i.e., CSRD, EU Taxonomy, SFDR, GHG Protocol, ISO:14064, ISO:56002, ISO:26000).

3 Industrial Demonstrations

Hands-on practical industrial demonstrations to get used to the advanced technologies and best practices. Use cases transfer from the most technologically advanced sustainable industrial leaders.

5 Experts Across Europe

Wide European network of sustainability advisors for the development of strategic and realistic roadmaps with the assistance of dedicated industry experts, coaches, and advisors' support for the implementation.

7 Financial Planning & Support

Dedicated financial advisory and support answering even the most difficult questions and covering a range of financial instruments to provide bespoke financial solutions tailored to each industrial enterprise.

2 Industrial Learning Strategy

Tailor-made industrial learning strategy embracing state-of-the-art tools to address sustainability gaps (i.e., individual support, VR blended approach courses, self-assessments, webinars, MOOCs, and Q&A sessions).

4 Bespoke Individual Support

Individual support for sustainability transition plans. Allocation of industrial coaches for each enterprise to support identifying the key transition areas and sustainable solutions.

6 Accredited Curriculum & Certification

High-quality curriculum addressing sustainability gaps and hands-on practical experience with accredited certification (University accepted credits) for continuing learning and industrial education.

“STAGE — a unique support mechanism, co-funded by the European Commission, helping enterprises with sustainability reporting and investment readiness.”
