

The Internet journal of **Materials Science and Technology** has been issued by the STU Faculty of Materials Science and Technology (STU MTF) since the year 2001. It provides the Faculty staff and external scientific community (i.e. external contributors involved in the Faculty scientific and research projects) with the space for publicising the output of their latest scientific, research and education activities. The journal represents a platform for obtaining mutually beneficial contacts and challenging cooperation with other educational and scientific institutions and also economic practice both at home and abroad.

Topics of contributions are focused on the STU MTF major research areas:

- Automation and Control
- Materials Engineering and Limit States of Materials
- Engineering Technologies and Materials
- Production Quality Engineering
- Enterprise Management

The journal follows the Statute of the STU MTF journals and the contributions are subject to anonymous peer-review. It thus meets the criteria of a scientific, peer-reviewed journal.
