

## Bachelor Theses UVTE – 2019

[Vlk, Erik](#) The application of CAx technology to design and production of supporting board

[Horváth, Peter](#) Design of machine for shipping container manipulation

[Kovár, Marek](#) Reconfigurable production based on industrial robots based on the Industry 4.0 concept

[Sládková, Nicolette](#) Usage Industry 4.0 in forming processes

[Kopúnek, Michal](#) Optimization parameters of laser welding for aluminum alloys

[Pňáček, Dávid](#) Design of the lever mechanism and the pump - project of the reduced functional model of the well with water pump for wind power

[Kadlec, Juraj](#) Design and construction of a three-axis cnc milling machine

[Kanta, Mária](#) Design and manufacture of component using additive manufacturing technology

[Holba, Karol](#) Design of components of clamping modular system

[Benedikovič, Richard](#) Proposal to a more effective production process of a manual assembly workplace

[Sálus, Martin](#) Use of CA Systems in the design and manufacturing of hinge support

[Ižvolt, Tomáš](#) Construction design of storage table for welding

[Spevák, Richard](#) Replacement of the vertical pneumatic actuator behind servo drive in the Schaeffler company s.r.o.

[Romančík, Dominik](#) Optimization of the process of tools production for bearings production in Schaeffler Skalica s r.o.

[Boor, Martin](#) Shaft design and production

[Levický, Marián](#) Design of mold and cores for engine block casting

[Nemečkaj, Ľubomír](#) Design of fixture for positioning of component

[Cesnek, Boris](#) Analysis of assembly systems

[Kováč, Michal](#) Design of a preparation designed to control the surface microgeometry of very small dimensions components

[Schuster, Martin](#) 3D Scanning and Reverse Engineering

[Marček, Matej](#) Engineering design of the fixture for clamping of the high pressure adapter

[Kukan, Peter](#) Design and production of tracked vehicle prototype at Devonic s.r.o.

[Rojko, Matej](#) Computer aided design of forming tools

[Bínovský, Marek](#) Layout design of the robotic workstation taking into account the current safety requirements for such workplaces

[Macánek, Jozef](#) Selection of suitable optical evaluation system for output control of clutch bearing

[Kováčik, Daniel](#) Variability of circularity measurement results on coordinate measuring machine

[Habšuda, Kevin](#) The geometry measuring of cutting tools

[Gunda, Milan](#) Properties of laser welded steel sheets

[Ištvanec, Štefan](#) Design of prototype cover for VEIT Hand finisher using additive manufacturing

[Havran, Filip](#) Optimization of tool on tube reduction for damper

[Jurkas, Filip](#) The evaluation of the working environment's quality in drop forges

[Ďuračka, Denis](#) Modernization of forging lines in drop forges

[Kosztolánszka, Erika](#) Wire production effectiveness increasing in company Vincente Tornis Slovakia

[Dubecký, Juraj](#) Design of a system of inter-operative manipulation in an automatic fattening station in Schaeffler company s.r.o

[Beťko, Lukáš](#) Increasing of deposition rate of arc welding methods

[Sýkora, Peter](#) Ultrasonic soldering

[Šimek, Pavol](#) Development of soldering alloys for higher application temperatures

[Žáčik, Ondrej](#) Economical estimate of cast crusher ring production

[Tóth, Tomáš](#) Proposal of welding method and welding equipment

[Dérik, Jakub](#) Design of method and device for welding of bolts

[Szücs, Simona](#) Using the PLM system Agile 2.0 as a support tool for design purposes in the company KUKA Slovakia s.r.o.

[Svrbický, Miroslav](#) Unconventional methods of drawing of steel cold wire

[Koník, Matúš](#) Proposal of shearing tool for cutting off gating system of thermoplastic part

[Detko, Peter](#) Use of computer aided technology in design and manufacturing of automobile wheel disc prototype

[Mocák, Peter](#) Numerical simulation of induction heating processes using the ANSYS software

[Beládi, Ľudovít](#) Design and production of floorball hockey blade using CAD software and 3D printer

[Pitek, Peter](#) Modification, design and manufacture of smartphone cover using CAx technologies

[Paulovič, Adam](#) The selection of machine tool for turning operations on given component

[Meliš, Martin](#) Design and manufacturing of rock-climbing board

[Minárik, Štefan](#) Rectification of cutting tools

[Štefánik, Daniel](#) Design and manufacture of the folding knife with CA systems

[Prílesan, Matúš](#) Design and production of the external lateral cutting tool model for education

[Rendeková, Tímea](#) Calibration sample design for Eddy Current Testing

[Bugyi, Jakub](#) Parts designing using a generative design

[Antala, Richard](#) Laser micromachining

[Šalát, Jozef](#) Automation of continuous centrifuges

[Koš, Jozef](#) Design and manufacture of the gap gauge prototype

[Dedík, Martin](#) Optical measurement of precise 2D and 3D shapes in piece production

[Šiška, Denis](#) Milling cycles in Sinumerik control system

[Socha, Milan](#) Design and creation of 3D CAD model of solid carbide mill in CAD software

[Novák, Michal](#) Design of the wind mast tower with the well - project of the reduced functional model of the well with water pump for wind power

[Matovič, Samuel](#) Design and production of the external bent turning tool model for education

[Belák, Adam](#) Ideal design of warehouse system for rotary components

[Jurkovič, Jakub](#) Generative NC programming by CATIA for milling

[Richnák, Marek](#) Comparison of CAM software in the manufacture

[Balogh, Ivan](#) Laser machining of metal matrix composites

[Gendiar, Ivan](#) Laser beam polishing

[Váňa, Vladimír](#) Decoupling ring tensioner

[Čižmárik, Ivan](#) Surface treatment of cutting tools

[Katona, Gabriel](#) Comparison of component manufacture by injection molding and additive manufacturing from the standpoint of accuracy of dimensions

[Dudás, Gergely](#) Rationalization of the production of selected components in the company TechniCAD s.r.o. using CAx systems

[Miček, Ján](#) Design and production of the external straight turning tool model for education

[Mendel, Ivan](#) Design and implementation of software support for the processing of the cutting wedge geometry

[Tomka, Patrik](#) Generative NC programming by CATIA for turning

[Veselý, Michal](#) Additive manufacturing of complex components

[Krajčovič, Denis](#) Laser machining

[Šumichrast, Dominik](#) Numerical simulations of torsional vibrations of drilling tool

[Pecko, Tomáš](#) Design optimisation of welded oil tank using CAD

[Vacula, Lukáš](#) Quality monitoring of shear surface when shearing of cages for needle roller bearings

[Řurmek, Andrej](#) Soldering of thin-walled copper pipes

[Soukup, Peter](#) Laser beam welding of brass

[Bakovka, Jozef](#) Laser beam welding of aluminium alloys
